Claude vs Cursor vs Windsurf

The 2026 Honest Comparison (no hype)

SWIPE →

> CONTEXT

Everyone's picking a side.

Nobody's testing them all on the SAME task.

I did. Here's what actually happened.

WINNER: DEPTH

01

CLAUDE CODE

Best for: agentic coding, long files, refactors.
Strength: reasoning depth.
Weakness: slower on tiny edits.

WINNER: SPEED

02

CURSOR

Best for: fast autocomplete, IDE flow.
Strength: cmd+K speed.
Weakness: loses context on big repos.

WINNER: ONBOARDING

03

WINDSURF

Best for: junior devs, guided flows.
Strength: cascade mode.
Weakness: still catching up on agent tools.

3.2x

Claude Code shipped a real feature
3.2x faster than Cursor on the same task

04

THE REAL ANSWER

Use Cursor for edits.
Use Claude Code for agents + refactors.
Use Windsurf to onboard your team.

05

WHAT I USE DAILY

Claude Code — 80%
Cursor — 15%
Windsurf — 5% (client training)

RECAP

THE TL;DR

- Claude = depth
- Cursor = speed
- Windsurf = training
- Stack all three, don't pick one
- The tool doesn't matter. Taste does.
