NODE://WHY

n8n looks scary.

It isn't. You only need 6 concepts.
Here they are.

START HERE

01

TRIGGER

The 'when' of a workflow.
Webhook, cron, form, new email, etc.

LEGO BLOCK

02

NODE

A single action.
Send email, call API, transform data.

03

EXPRESSION

{{ $json.field }} — pulls data from prior nodes.
The one thing that unlocks EVERYTHING.

LOGIC

04

IF / SWITCH

Branching logic.
'If new customer → welcome email'.

05

LOOP

Process arrays one item at a time.
Essential for batch jobs.

TRICKY

06

MERGE

Combine branches back together.
The thing nobody explains.

07

THE FIRST WORKFLOW

Cron (every Monday) → HTTP (GET news) → OpenAI (summarize) → Gmail (send)
4 nodes. Real value.

RECAP

THE 6 CONCEPTS

- Trigger · Node · Expression
- If · Loop · Merge
- Learn these → build anything
- Don't watch tutorials. Ship workflows.

NODE://END

BUILT IT?

Reply 'DONE' — I'll send you 5 more templates.
